Technical Visit on CLP System Control Centre, Tai Po (12 April 2014)

CLP Power Hong Kong Limited - System Control Centre Nerve Centre of System Operation

The System Control Centre (SCC) is the operation nerve centre of Hong Kong's largest electricity supplier, CLP Power Hong Kong Limited (CLP Power). Located in Strafford House, Tai Po, and managed by the System Operation Department of the Power Systems Business Group, it is one of the world's most advanced power system control centers.

The SCC is responsible for safe, secure and efficient operations of CLP Power's power system, ensuring our customers receive a continuous, high quality electricity supply through an extensive network. It supplies approximately 80% of Hong Kong's power needs. To achieve these objectives, our engineers direct, monitor and control the real-time generation, transmission and distribution of electricity on a minute-by-minute basis. They estimate electricity demand and schedule adequate generation. Working closely with other operational units within CLP Power and regional counterparts, we play a key role in delivering a 99.999% reliable electricity supply to our customers.
